Understanding BINs and VBV Systems What Are BINs? Bank Identification Numbers (BINs), also known as Issuer Identification Numbers (IINs), are the first six digits of a credit or debit card number. They serve the purpose of identifying the institution that issued the card, facilitating transaction routing, security checks, and fraud prevention. Key points about BINs: Unique identifiers for card issuing banks or institutions. Help merchants and payment processors verify card authenticity. Used in fraud detection and risk management. What Is a VBV System? Verified By Visa (VBV) is a security protocol designed to enhance online transaction security. Triggers additional verification steps for flagged transactions. Often used in conjunction with BIN data to assess transaction risk. What Are Non VBV Bins? Definition and Characteristics Non VBV bins refer to BINs associated with cards that do not fall under the VBV authentication system. These are often cards issued by banks or financial institutions that 2 do not participate in VBV protocols or have not been flagged for
